

Dear Valued Patron,

Thank you for your continued support in helping your state and local government map broadband access across Wisconsin. We are glad to report that due in part to your efforts with the LinkWISCONSIN team, we have collected nearly 200,000 speed tests as of the end of June. The Mobile Pulse team is glad to support your testing efforts by improving our app. This includes the capability to limit the amount of testing that your phone completes and thereby preserving your data plan. As data plans can change we want to make sure you are aware of how you can adjust your data usage with the LinkWISCONSIN Drive Test app to ensure that it fits within your data limit. Usually you can find this in the 'Settings' of your device.

You can stop or limit the app from testing by following these simple instructions:

1. Open the app and go to the 'Settings' tab. Click the 'Speed Test' text near the top of your screen to see this on an Android. 'Settings' should be visible in the bottom of an iPhone screen.
2. Mark the 'Config override' check box on an Android device, or change the 'Config override' setting to 'ON' with your iPhone.
3. Select the 'Max data per month' setting to change the amount of data the app uses on your phone. The app reads this number in megabytes, so follow this conversion scheme to set your new limit:  
0 MB = 0 GB (no data used)  
512 MB = .5 GB  
1024 MB = 1 GB  
2048 MB = 2 GB
4. Press 'OK' and your new data limit is set!

If you do see that the LinkWISCONSIN Drive Test app is using more data than you have set, please contact the Mobile Pulse app team at [support@mobilepulse.com](mailto:support@mobilepulse.com). Once again, we thank you for working with us to test local mobile broadband quality.

Thank You,

The Mobile Pulse Team
